### Breeder/Farmer

We are very excited to add this homozygous polled Limousin bull to our Signature Beef line up. Theoden will provide an attractive option to customers who are looking to introduce polled genetics into their herds without compromising on important management and phenotypic traits. This young sire carries two copies of the F94L Myostatin gene, whilst exhibiting great length and width. Theoden also possesses desirable EBV figures for birthweight and calving ease, making this bull a great choice for pedigree and commercial breeders.
